

Dear Friends and Partners,

We at Eltam wish you and your beloved ones a Happy and Prosperous Year 2015!

In this year, we will start with a tradition of publishing short and informative newsletters and hope you will enjoy reading them.

Eltam Ein- Hashofet is going through changes in order to introduce a new generation of lighting solutions to the changing global market.

Among our solutions, you will find the ONSiTE™ - Lighting control and management package, smart LED drivers with various communication protocols and many more.

Our continuous goal is to provide advanced lighting solutions considering new demands and changes of the energy efficiency tendency.

We are expecting to increase our cooperation in 2015 and the years after doing all the steps to bring you the right solutions.

Please  our page on Facebook, in which we will introduce our updates, news and surprises. This will be also an additional platform for your kind comments and proposals.

Yours,
Eltam-EH team

Eltam EH proudly presents OCA!

A new ONSiTE Commissioning App which provides a fast and easy way to capture, commission and add devices to the ONSiTE management system.

Definitions are done in your smartphone, while major parts of data are received automatically by scanning barcodes and GPS location spotting.

OCA enables to define the hierarchy position of each unit in the topological tree, define the exact unit type and set all parameters of the connection and connectivity. The information transferred in real time to the ONSiTE server.

This enables a real-time control and management of an installation/ supporting/ retrofitting processes for system managers and operators.

Install the App today! For more information contact us now Eltam@eltam-eh.com

Monthly tip!

Add Management and Control in LED lighting systems

The choice of LED lighting usually achieves significant energy saving.

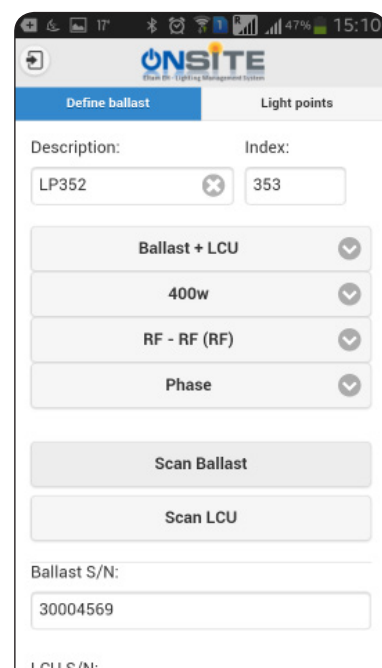

Due to this, some users are reluctant to further implement light control features, thinking that the extra benefit of energy saving is greatly diminished, making the investment not worthwhile.

LED lighting solutions hold some inherent features that are naturally favorable to light control:

- o *The added cost between controllable and non-controllable LED drivers is usually not high.*
- o *LED lifetime is not effected/ diminished by multiple switching or dimming with ability for deep dimming saving up to additional 50% energy saving.*
- o *LED achieves full light output instantaneously – there is no "run-up" period as in older technologies.*
- o *Control and management create an ability to analyze failures and save service costs.*
- o *There are autonomous, localized and full lighting control systems available - the correct solution should be chosen according to the actual requirements of the lighting system.*
